Translating Technical Risk Into Executive Accountability

WHAT I BRING TO YOUR BOARD

- Built and operate enterprise compliance programs at a \$400M Nasdaq-listed public safety technology company — SOC 2 Type 2, SOX ITGC, CJIS, HIPAA, TX-RAMP — with zero audit exceptions across all engagements.
- Designed and deployed an AI Governance framework (ISO/IEC 42001 reference) enabling secure GenAI adoption across 350+ employees, including DLP controls and shadow AI detection.
- Translate complex cybersecurity risk into fiduciary language for executive and board-level audiences — enabling informed governance decisions without requiring technical fluency.
- Reduced third-party vendor review turnaround by ~50% through risk-based automation. Cut customer security questionnaire response time from two weeks to three days.
- Cleared for CJIS access; experienced navigating multi-state agency relationships, ORI coordination, and law enforcement data governance — rare in commercial security.

WHERE I ADD VALUE

- **Cybersecurity risk posture, vendor risk, and incident response readiness — communicated in terms that protect board fiduciary duty.** Audit & Risk Oversight:
- **Advise on achieving and maintaining high-assurance certifications (SOC 2, SOX, CJIS) that unlock regulated enterprise customers and satisfy investor scrutiny.** Compliance Credibility:
- **Responsible AI adoption policies, data classification, and IP protection frameworks aligned to emerging regulatory requirements.** AI & Data Governance:
- **Position security posture as a competitive differentiator that accelerates enterprise deal closure in regulated markets.** Security as Revenue Enabler:

IDEAL FIT

Series B–C companies in regulated verticals: public safety, GovTech, healthcare, or fintech. Companies where compliance maturity is a revenue blocker or competitive gap. Boards seeking an independent voice on cybersecurity, AI risk, or audit committee oversight.
